SUMMARY

M.S. Data Science student, graduating August 2026. Two years at Epic Systems designing SQL-based reports and dashboards for pharmacy operations. I primarily focus on building reliable data pipelines and machine learning models for healthcare, infrastructure, and environmental challenges.

PROFESSIONAL EXPERIENCE

Technical Solutions Engineer

June 2023 – June 2025

Epic Systems, Madison, WI

- Primary contact for 5 healthcare organizations on the Willow (pharmacy) application, troubleshooting issues across inpatient, inventory, and home infusion workflows and working with developers to reduce repeat tickets and shorten resolution time
- As a member of the reporting team, built custom SQL reports for Willow customers and supported other TSEs, producing reports used regularly by pharmacy IT and operations for pharmacy decisions.
- Designed the default pharmacy inventory dashboard used by pharmacy managers across all Willow Inventory implementations, gathering requirements from pharmacy leaders and working with developers to make key inventory data available in Epic
- Led a company-wide initiative to increase adoption of key features across all Epic applications and clients, coordinating cross-functional work and tracking progress to drive clear increases in feature usage

Operations Coordinator

June 2021 – June 2023

Face Reality Skincare, Danville, CA

- Automated recurring reports and data cleaning in Excel using Power Query and Power Automate, saving several hours per week and making weekly operations and finance reports more consistent
- Built a financial forecasting model used by leadership to plan monthly and annual budgets and expenditures across all teams

EDUCATION

M.S. in Data Science

August 2025 – August 2026

Willamette University | GPA: 4.0

B.B.A in Economics

August 2019 – May 2023

Gonzaga University | GPA: 3.90

PROJECTS

Data Center Economic Impact Analysis (Capstone) | Python, SQL, scikit-learn

- Analyzed how data centers affect county-level economic outcomes using public data on employment, business patterns, air quality, and income
- Built an end-to-end pipeline in Python to extract, clean, and transform data into a PostgreSQL database
- Implemented multiple models (linear/logistic regression, random forest, neural network) to estimate economic impact by county

Public Transport, Business & Socioeconomic Health in Portland | SQL, QGIS, Power BI, Python

- Built a SQL database from shapefiles and transport data, transforming spatial and non-spatial data in QGIS and Python
- Created a Power BI dashboard with choropleth maps showing how transit access correlates with business activity and socioeconomic indicators

ADDITIONAL SKILLS

- **Languages:** SQL, Python, R, VBA, Cypher, M, HTML
- **Data Engineering & Databases:** Airflow, dbt, PostgreSQL, DuckDB, S3, Parquet, ETL/ELT, data pipelines, data warehousing, dimensional modeling, MongoDB, Neo4j, JSON
- **Analytics & ML:** pandas, numpy, scikit-learn, PyTorch, regression, random forest, neural networks, feature engineering
- **Visualization:** Power BI, Excel (Power Query, Power Pivot, Power Automate), Grafana, Shiny (R), seaborn, KPI/metric design
- **Geospatial:** choropleth mapping, shapefiles, QGIS
- **Platforms & Dev Tools:** Git/GitHub, Docker, Docker Compose, SSH, VS Code
